AZURN MCP Powers the TRAINING Industry

AZURN's state-of-the-art web and video conferencing solution allows users to speak and see each other, as well as share and edit documents in real-time. Training Institutions can now break the barrier of time and distance to deliver courses from anywhere and at anytime. With no ***special technology*** other than broadband Internet, browser and normal telephone required, the amount of time and money that can be saved by avoiding expensive travel means the 'Total cost' of attending courses can be reduced significantly.

Our Web Conferencing application provides Tutors/Trainers with the ability to conduct fully interactive sessions that include multi-party Video, Audio, full desktop application/document and presentation sharing with remote control,. The software is compatible with most web cameras and can be accessed via leading web browsers and on standard Internet connections and normal fixed/mobile phones. That means all features in one box and quick to set-up and easy to use.

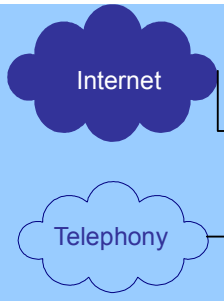
It is essential that the Trainer is able to teach students **as effectively as** an online course, and communication is viewed as an essential part of the learning and teaching experience. Usually each Trainer has his/ her own multi-modal style, including talking, drawing on the board, answering questions, involving students in examples and providing written notes. The challenge is to provide a simple-to-use yet powerful platform so the Trainers can preserve their personal style and bring a ***human dimension*** to online learning.

The days of careful scheduling and planning of courses, physical assembly of trainees in one place, flying in the Trainer and his team, and using up expensive physical conferencing venues, are now passe. With the ease with which Training can be conducted using MCP Hosted hardware and associated Browser based software Trainers can now schedule courses with much more frequency and flexibility. Trainees attend these courses wherever they are, in real-time at a time that is best suited and tailored for your exact needs.

AZURN offers a platform on which one could teach and learn, with minimal training and no requirement for special technology investment. All you need is a Internet connection, browser, web-cam and a telephone.

Students can then join the class by simply clicking on the "course attendance invitation" email. They will be taken through a very short, firewall-friendly, set-up process, then into the live training area where they can collaborate with the Teacher and others during the training all under the control of the Tutor.

Azurn provides a safe and secure environment for learning and can also save students, their parents and tutors significant travel time and costs.



AZURN - A Multi-media Convergence Appliance:
Multimedia Convergence Platform based on Patented Technology **UnifiedXML**

Just IMAGINE a very-easy-to-use Webex + Skype that can also connect to land lines (PSTN) available in a box that is your own!
